DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coulter et al., (US 2004/0243775).

As per claim 1, Coulter teaches a system method for generating a block-level (disk drive) write operation, wherein the block-level write operation causes a value (via metadata indicating last file modification) to be written to a primary volume memory (via snapshot); and generating information indicative of whether any of the block-level write operation [0015] should be transferred to a secondary site during replication of data in the primary volume. (Abstract, [0028-0052])

Coulter teaches a storage controller for controlling storage devices and conducting block-level incremental backups is configured to execute the aforementioned methods, wherein internal information (metadata) describes which data blocks have moved from the primary volume to the secondary volume in response to data writes on the primary volume and also describes where the data resides on the secondary volume in response to a

snapshot command.

As per claim 1, Coulter teaches a system method for generating a block-level (disk drive) write operation, wherein the block-level write operation causes a value (via metadata indicating last file modification) to be written to a primary volume memory (via snapshot); and generating information indicative of whether any of the block-level write operation [0015] should be transferred to a secondary site during replication of data in the primary volume. (Abstract, [0028-0052])

Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Midgley et al., (US 2003/0074378).

As per claim 1, Midgley teaches a system method for generating a block-level (disk drive) write operation, wherein the block-level write operation causes a value (via metadata indicating last file modification) to be written to a primary volume memory; and generating information indicative of whether any of the block-level write operation should be transferred to a secondary site during replication of data in the primary volume. (Abstract, pgs. 4-12)
